DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Dicran Halajian on July 15, 2008.

Claim 23 of the application has been amended as follows:

3. (Currently Amended) An apparatus for determining focus of an optical system, ~~which wherein the~~ apparatus comprises successively a radiation source for supplying an illumination beam, ~~a test objects,~~ a location for the optical system to be measured, a radiation-sensitive detection system and processing means for processing signals from the detection system, characterized in that the test ~~object comprises two sub-objects, which are arranged at different sides of the expected best focus of the optical system and at different locations with respect to the axis of the apparatus, in that the radiation-sensitive detection system comprises separate detection areas for the images of the sub-objects and in that the processing means comprises means for calculating the difference in contrast of the images~~ objects comprise a first test object between an illumination system and an expected focal plane of the optical system and a second test object between the expected focal plane and the optical system, whereby the first and

second test objects are arranged at different locations with respect to the optical axis of the optical system, and wherein focus is established by determining modulation depth values of each of two test object images of the first and second test objects and subtracting the obtained modulation depth values from each other to obtain a difference value which represents a position of focus with respect to positions of the first and second test objects.

Amendment

The amendment filed on 30 June 2008 has been entered into this application.

Response to Arguments

Applicant's arguments, see pages 5-7, filed on 30 June 2008, with respect to rejections of claims 1-6 have been fully considered and are persuasive. The rejections of claims 1-6 have been withdrawn.

Allowable Subject Matter

Claims 1-6 are allowed.

As to claims 1, the prior art of record, taken alone or in combination, fails to disclose or render obvious establishing the position of the focal plane from the modulation depth of the test object image, characterized in that the step of arranging a test object comprises arranging a first test object between the illumination system and the expected focal plane of the optical system and a second test object between this plane and the optical system, whereby the first and second test objects are arranged at different locations with respect to the optical axis of the optical system, and in that the step of establishing focus comprises determining the modulation depth of each of the two test object images and subtracting the obtained modulation depth values from each other to obtain a difference value, which represents the position of focus with respect to

the positions of the two test objects, in combination with the rest of the limitations of the claim. Claim 2 is allowable by virtue of its dependency.

As to claim 3, the prior art of record, taken alone or in combination, fails to disclose or render obvious characterized in that the test objects comprise a first test object between an illumination system and an expected focal plane of the optical system and a second test object between the expected focal plane and the optical system, whereby the first and second test objects are arranged at different locations with respect to the optical axis of the optical system, and wherein focus is established by determining modulation depth values of each of two test object images of the first and second test objects and subtracting the obtained modulation depth values from each other to obtain a difference value which represents a position of focus with respect to positions of the first and second test objects, in combination with the rest of the limitations of the claim. Claim 4-6 are allowable by virtue of their dependency.

Additional Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references listed in the attached form PTO-892 teach of other prior art an apparatus/method of determining the focus of an optical system.
